

Saint-Gobain Technical Fabrics

Saint-Gobain Technical Fabrics (SGTF) is part of the Saint-Gobain group, the world leader in production and distribution of construction materials. SGTF, with EUR 200 million in sales and 1100 employees, holds a unique position on the market because it is the only supplier to produce and sell woven and non-woven glass materials for the construction sector. SGTF offers products and solutions for different applications such as acoustic insulation, facade cladding, surfacing, reinforcement, insect protection and decoration.

Types of products

- Joint tape for drywall panels
- Reinforcement mesh for facade claddings
- Paintable glass fiber wall coverings for interior decoration
- Glass veils for waterproofing and ceiling panels, acoustic insulation, reinforcement of floor coverings, surfacing of insulating products and plaster.
- Laid scrim for specific reinforcement solutions

Areas of application

SGTF glass veil

a non-woven material manufactured using dispersed, chemically bound short glass fibers. With its excellent dimensional stability, fire resistance, chemical inertness and tensile strength, it has numerous applications in the construction sector: waterproofing, ceiling tiles, reinforcement of carpeting and PVC flooring, acoustic insulation, surfacing of insulation products and plaster.

Saint-Gobain Technical Fabrics

Joining of wall panels

for any type of environment, courtesy of our line of FIBATAPE joint tapes, with their numerous technical advantages: antibacterial, humidity, extreme stress, and extra-flat joints.

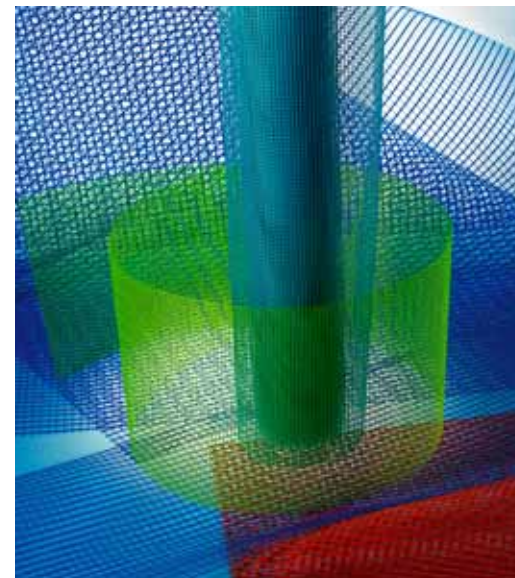

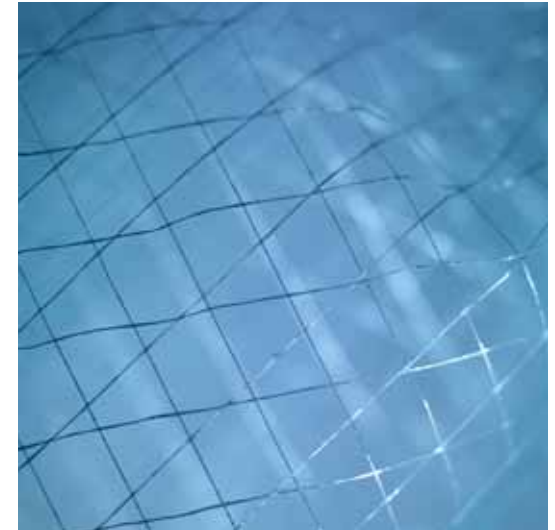

Facade cladding reinforcement

thanks to SGTF's meshes for reinforcing decorative facade claddings and the meshes for External Thermo Insulating Composite Systems.

SGTF laid scrim

a network of interlocking continuous strands, bound at intersection points by a chemical binder. It is used in waterproofing to reinforce the roofing membranes, cement panels and floor coverings. Light laid scrim allows for the reinforcement of packaging, composite materials (pipes and tanks), flexible membranes (sailing cloth and sheets) and cleaning products (such as sponges, medical garments and wipes)

Saint-Gobain Technical Fabrics

NOVELIO® paintable glass wall covering

provides for the decoration and protection of interior walls and ceilings.

In addition to its Euroclass and Oeko-Tex Class I ratings, NOVELIO® paintable wall covering is the perfect solution for technical constraints with its range of classic, pre-painted, pre-glued, self-adhesive, antibacterial and custom design wall coverings.

SGTF also offers...

The possibility of manufacturing products that solve a specific problem, or meet a particular need encountered by our partners.

The advantages of glass fiber

- High tensile strength
- Durability
- Resistance to humidity
- Ease of use
